

Hughes Selected to Deploy Private 5G Network for DoD

March 21, 2022

5G System from Hughes to Utilize Versatile Spectrum from DISH, Serve as Testbed for Advanced Network Infrastructure and Edge Cloud

GERMANTOWN, Md., March 21, 2022 /PRNewswire/ -- [Hughes Network Systems, LLC](#) (HUGHES), an innovator in satellite and multi-transport technologies and networks for 50 years, today announced the award of an \$18 million contract from the Department of Defense (DoD) to deploy a standalone 5G network at Naval Air Station Whidbey Island in Washington state. The Other Transaction Agreement (OTA) was issued through the Information Warfare Research Project (IWRP) consortium, a collaboration to engage industry and academia to develop and mature technologies in the field of information warfare that enhance Navy and Marine Corps mission effectiveness. Hughes will serve as the prime contractor connecting the base with a secure 5G network to support operations, maintenance and flight traffic management. The Hughes 5G network will utilize spectrum from DISH Wireless, the only carrier capable of providing the right combination of low band, mid band, and high band (mmWave) spectrum. This work is part of on-going DoD 5G experimentation led by the Under Secretary of Defense for Research and Engineering at Joint Base Pearl Harbor-Hickam.

Demonstrating to DoD how advanced 5G infrastructure from Hughes—including Edge Cloud—can transform base operations.

"Over the course of this three-year project, we will demonstrate for the U.S. Department of Defense how 5G infrastructure from Hughes – including a packet processing core, radio access, edge cloud, security and network management – can power the resilient networking necessary to transform base operations," said Dr. Rajeev Gopal, vice president, Advanced Programs, Hughes. "Today's walkie-talkies, paper-trails and telephone conversations will be replaced with a private, secure 5G network over which air station processes and systems will be automated and continuously optimized. What's more, the standalone, standards-based configuration – including O-RAN standards for flexibility – will connect seamlessly anywhere on the planet using Low Earth Orbit (LEO) and Geostationary Orbit (GEO) satellite connectivity."

"DISH is delivering the connectivity for this private 5G network, providing engineering services, support and access to our spectrum portfolio," said Stephen Bye, chief commercial officer, DISH. "As we build our own network, we're proud to team with Hughes in this important project to deliver a fast, secure, reliable network to serve the U.S. Department of Defense and support mission-critical functions."

"This award is a testament to Hughes leadership in engineering and managing smart networks that enable the military to exchange information with the right people at the right time with an any-network approach that's hardware agnostic and transport independent," said Rick Lober, vice president and general manager, Hughes Defense. "We look forward to showcasing our capabilities in secure management of a 5G stand-alone deployment with advanced artificial intelligence and machine learning for ongoing enhancement and increasing efficiencies."

The deployment, which began in September 2021, leverages Zero Trust Architecture (ZTA) and meets National Security Administration (NSA) Commercial Solution for Classified (CSFC) requirements. Working together on the project, with Hughes as the integrator, are: Boingo Wireless, Cisco, Dell, DISH, JMA Wireless and Intel.

About DISH Wireless

DISH Network Corporation is a connectivity company. Since 1980, it has served as a disruptive force, driving innovation and value on behalf of consumers. Through its subsidiaries, the company provides television entertainment and award-winning technology to millions of customers with its satellite DISH TV and streaming SLING TV services. In 2020, the company became a nationwide U.S. wireless carrier through the acquisition of Boost Mobile. DISH continues to innovate in wireless, building the nation's first virtualized, O-RAN 5G broadband network. DISH Network Corporation (NASDAQ: DISH) is a Fortune 200 company.

About Hughes Network Systems

Hughes Network Systems, LLC (HUGHES), an innovator in satellite and multi-transport technologies and networks for 50 years, provides broadband equipment and services; managed services featuring smart, software-defined networking; and end-to-end network operation for millions of consumers,

businesses, governments and communities worldwide. The Hughes flagship Internet service, HughesNet®, connects more than 1.5 million subscribers across the Americas, and the Hughes JUPITER™ System powers Internet access for tens of millions more worldwide. Hughes supplies more than half the global satellite terminal market to leading satellite operators, in-flight service providers, mobile network operators and military customers. A managed network services provider, Hughes supports nearly 500,000 enterprise sites with its HughesON™ portfolio of wired and wireless solutions. Headquartered in Germantown, Maryland, USA, Hughes is owned by EchoStar. To learn more, visit www.hughes.com or follow [@HughesConnects](https://twitter.com/HughesConnects) on Twitter and LinkedIn.

About EchoStar

EchoStar Corporation (NASDAQ: SATS) is a premier global provider of satellite communication solutions. Headquartered in Englewood, Colo., and conducting business around the globe, EchoStar is a pioneer in secure communications technologies through its Hughes Network Systems and EchoStar Satellite Services business segments. For more information, visit www.echostar.com. Follow [@EchoStar](https://twitter.com/EchoStar) on Twitter.
