Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1, 2014 to December 31, 2014.

SECTION 1—CONFLICT MINERALS DISCLOSURE

ITEM 1.01. Conflict Minerals Disclosure and Report

Conflict Minerals Disclosure

This Specialized Disclosure Report on Form SD (“Form SD”) of EchoStar Corporation (the “Company”) is filed pursuant to Rule 13p-1 (the “Rule”) promulgated under the Securities Exchange Act of 1934, as amended, for the reporting period of January 1, 2014 to December 31, 2014.

The Rule was adopted by the Securities and Exchange Commission (“SEC”) to implement reporting and disclosure requirements related to certain specified minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010. The specified minerals are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, which are limited to tantalum, tin and tungsten (the “Conflict Minerals”). The Rule requires disclosure of certain information when a registrant manufactures or contracts to manufacture products that contain Conflict Minerals that are necessary to the functionality or production of such products. For products that contain such necessary Conflict Minerals, the registrant must conduct in good faith a reasonable country of origin inquiry designed to determine whether any of the Conflict Minerals originated in the Democratic Republic of the Congo or certain adjoining countries (each, a “Covered Country” and collectively, the “Covered Countries”). If based on such inquiry, a registrant knows or has reason to believe that any of the necessary Conflict Minerals contained in its products originated or may have originated in a Covered Country and that such necessary Conflict Minerals may not be solely from recycled or scrap sources, the registrant must conduct due diligence with respect to the source and chain of custody of the Conflict Minerals to determine if the necessary Conflict Minerals directly or indirectly finance or benefit armed groups in the Covered Countries.

In accordance with the Rule, for the reporting period of January 1, 2014 to December 31, 2014, the Company:

- Determined that the Company manufactured, or contracted to manufacture, products (the “Covered Products”) for which the Conflict Minerals are necessary to the functionality or production of those products.
- Conducted a good faith reasonable country of origin inquiry regarding the Conflict Minerals, which was reasonably designed to determine whether any of the Conflict Minerals originated in the Covered Countries or whether any of the Conflict Minerals may be from recycled or scrap sources. Based on that inquiry, the Company has reason to believe that the Conflict Minerals may have originated in the Covered Countries and that such Conflict Minerals may not be from recycled or scrap sources.
- Conducted due diligence with respect to the source and chain of custody of the Conflict Minerals.

Based on the results of these procedures, the Company has filed this Form SD and the associated Conflict Minerals Report. A copy of the Company's Conflict Minerals Report is filed as Exhibit 1.01 to this Form SD, and is publicly available on the Company's website at <http://sats.client.shareholder.com/sec.cfm>. Unless otherwise stated in this Form SD and the Conflict Minerals Report filed as Exhibit 1.01 hereto, any documents, third-party materials or references to websites, including the Company's, are not incorporated by reference in, or considered to be a part of, this Form SD and the accompanying Conflict Minerals Report.

Forward-Looking Statements

This Form SD and the attached Conflict Minerals Report contain "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, Section 27A of the Securities Act of 1933, as amended and Section 21E of the Exchange Act of 1934, as amended including but not limited to statements about our estimates, expectations, plans, objectives, strategies, and financial condition, expected impact of regulatory developments and legal proceedings, opportunities in our industries and businesses and other trends and projections for the next fiscal quarter and beyond. All statements, other than statements of historical facts, may be forward-looking statements. Forward-looking statements may also be identified by words such as "anticipate," "intend," "plan," "goal," "seek," "believe," "estimate," "expect," "predict," "continue," "future," "will," "would," "could," "can," "may" and similar terms. These forward-looking statements are based on information available to us as of the date of this Form SD and the attached Conflict Minerals Report and represent management's current views and assumptions. Forward-looking statements are not guarantees of future performance, events or results and involve potential known and unknown risks, uncertainties and other factors, many of which may be beyond our control and may pose a risk to our operating and financial condition. Accordingly, actual performance, events or results could differ materially from those expressed or implied in the forward-looking

2

statements due to a number of factors. Important factors that could cause actual outcomes to differ materially from those contained in any forward-looking statement include those described in the Company's reports, including its annual report on Form 10-K for the fiscal year ended December 31, 2014, the Company's quarterly reports on Form 10-Q and other forms filed by the Company with or furnished by the Company to the Securities and Exchange Commission. You should not put undue reliance on any forward-looking statements. Unless we are required to do so under U.S. federal securities laws or other applicable laws, we do not intend to update or revise any forward-looking statements.

ITEM 1.02. Exhibit

As specified in Section 2, Item 2.01 of this Form SD, the Company is hereby filing its Conflict Minerals Report as Exhibit 1.01 to this report.

SECTION 2—EXHIBITS

ITEM 2.01. Exhibit

The following exhibit is filed as part of this report.

EHOSTAR CORPORATION

Conflict Minerals Report

For the reporting period from January 1, 2014 to December 31, 2014

This Conflict Minerals Report (the "Report") of EchoStar Corporation (the "Company," "we," "our," and/or "us") has been prepared pursuant to Rule 13p-1 (the "Rule") promulgated under the Securities Exchange Act of 1934, as amended, for the reporting period from January 1, 2014 to December 31, 2014.

The Rule was adopted by the Securities and Exchange Commission ("SEC") to implement reporting and disclosure requirements related to certain specified minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 and requires disclosure of certain information when a company manufactures or contracts to manufacture products and the minerals specified in the Rule are necessary to the functionality or production of those products. The specified minerals are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, which are limited to tantalum, tin and tungsten (collectively, the "Conflict Minerals") that originated in the Democratic Republic of the Congo ("DRC") and certain adjoining countries (collectively with the DRC, the "Covered Countries").

COMPANY OVERVIEW AND DESCRIPTION OF PRODUCTS COVERED BY THIS REPORT

We are a global provider of satellite operations, video delivery solutions, digital set-top boxes, and broadband satellite technologies and services for home and office, delivering innovative network technologies, managed services, and solutions for enterprises and governments. This Report relates to products: (i) for which Conflict Minerals are necessary to the functionality or production of such products; (ii) that were manufactured or contracted to be manufactured, by the Company; and (iii) for which the manufacture was completed during calendar year 2014.

These products, which are collectively referred to in this Report as "Covered Products," include:

Digital Set-Top Boxes — The Company's digital set-top boxes include high definition and standard definition digital set-top boxes, used by consumers for the viewing of television content delivered via satellite, cable or over the air. Certain models of the Company's digital set-top boxes also contain certain internal hard drives to enable digital video recorder features as well as software enabled advanced capabilities and functionalities. In addition to digital set-top boxes, the Company also designs and develops related products, including satellite dishes and remote controls.

Slingbox — The Company's Slingbox, which is sold directly to consumers, enables "placeshifting" technology, which allows a customer, at his or her option, to watch and control their digital television content anywhere in the world via a broadband internet connection.

Broadband Satellite Systems — The Company's broadband and satellite products include broadband systems and terminals. Our advanced broadband satellite systems support the delivery of a wide range of bandwidth-intensive services as well as privately-branded service offerings, including high-speed internet/intranet access, video conferencing, distance learning, telemedicine, newsgathering, fleet operations and broadband on planes, trains and maritime. In addition, we design and manufacture mobile satellite systems, handheld devices and IP data terminals for mobile satellite operators.

With respect to our digital set-top boxes, although the Company designs, engineers and distributes digital set-top boxes, Slingboxes and related products, it is not directly engaged in the manufacturing process. Rather, the Company outsources the manufacturing of its digital set-top boxes and related products to third parties who manufacture its products according to specifications supplied by the Company. With respect to our broadband and satellite products, certain products are assembled at the Company's facilities in Maryland; however, the Company also outsources a significant portion of the manufacturing of its products to third parties. We also work with third-party vendors for the development and manufacture of components that are integrated into our products. We develop dual sourcing capabilities for critical parts when practical and we evaluate outsourced subcontract vendors on a periodic basis.

REASONABLE COUNTRY OF ORIGIN INQUIRY

Pursuant to the Rule, the Company conducted a good faith reasonable country of origin inquiry ("RCOI") regarding the Conflict Minerals. This good faith RCOI was reasonably designed to determine whether any of the Conflict Minerals originated in the Covered Countries or whether any of the Conflict Minerals may be from recycled or scrap sources. Following this inquiry, the Company had reason to believe that certain of the Conflict Minerals necessary to the functionality or production of the Covered Products may have originated in the Covered Countries and that such Conflict Minerals may not be from recycled or scrap sources. Therefore, the Company performed due diligence on the source and chain of custody of the Conflict Minerals. There is significant overlap between the Company's RCOI efforts and its due diligence measures performed. The due diligence measures performed by the Company are discussed below.

DUE DILIGENCE PROCESS

The Company's supply chain with respect to the Covered Products is complex, and there are many third parties in the supply chain between the ultimate manufacture of the Covered Products and the original sources of the Conflict Minerals. The Company does not purchase Conflict Minerals directly from mines, smelters or refiners. The Company must therefore rely on its suppliers to provide information regarding the origin of the Conflict Minerals that are included in the Covered Products. Moreover, the Company believes that the smelters and refiners of the Conflict Minerals are best situated to identify the sources of Conflict Minerals, and therefore has taken steps to identify the applicable smelters and refiners of Conflict Minerals in the Company's supply chain.

The Company's due diligence measures for the reporting period January 1, 2014 to December 31, 2014 have been designed to conform to the five-step framework laid out by the Organization for Economic Co-operation and Development in its OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Second Edition (2013), including the related supplements on gold, tin, tantalum and tungsten (collectively, the "OECD Guidance"). The OECD Guidance consists of a five step due diligence framework which includes: (i) establishing strong company

management systems; (ii) identifying and assessing risks in the supply chain; (iii) designing and implementing strategies to respond to identified risks; (iv) carrying out independent third-party audit of smelter/refiner due diligence practices; and (v) reporting annually on supply chain due diligence.

Establish Strong Company Management Systems for Conflict Minerals Supply Chain Due Diligence and Reporting Compliance

In the third quarter of 2012, the Company created an internal team composed of senior members of the Company's supply chain and procurement operations and the legal department to evaluate the Company's supply chain processes and sourcing procedures and to design and support the Company's due diligence efforts. Since that time, the team has met regularly to develop and refine a due diligence process that: (i) was consistent with the OECD Guidance, (ii) conformed to the requirements of the Rule, and (iii) was appropriate given the structure and operations of the Company's supply chain departments. The Company's internal audit department monitors the diligence process, provides feedback throughout the process, and reviews the due diligence results.

Once the due diligence process was developed, each supplier was assigned to a specific employee within the supply chain department that reported to a senior supply chain manager. Each year, the Company identifies any new suppliers and such suppliers are assigned a supply chain department employee. A system of communication was established among the members of the team and a senior supply chain manager disseminated all necessary information and documentation to each employee in the supply chain department responsible for interfacing directly with suppliers.

Adopt and commit to a supply chain policy for minerals from conflict-affected and high-risk areas

The Company has adopted a policy relating to the Conflict Minerals (the "Policy"), incorporating the standards set forth in the Electronic Industry Citizenship Coalition ("EICC") Code of Conduct. The Policy states:

"Suppliers shall have a policy to reasonably assure that the tantalum, tin, tungsten and gold in the products they manufacture does not directly or indirectly finance or benefit armed groups that are perpetrators of serious human rights abuses in the Democratic Republic of the Congo or an adjoining country. Suppliers shall exercise due diligence on the source and chain of custody of these minerals and make their due diligence measures available to the Company upon the Company's request. Suppliers must be prepared to assist the Company in meeting the conflict minerals reporting requirements of the Dodd-Frank Act, as well as other national or international mineral reporting regimes that may arise in the future."

The Policy is incorporated into the Company's supplier code of conduct, which is available on our supplier websites. All suppliers of the Company are obligated to comply with the supplier code of conduct.

Establish a system of controls and transparency over the Conflict Minerals supply chain

The Company has established a system of controls to promote transparency over its conflict minerals supply chain by utilizing the Conflict Minerals Reporting Template, which is designed to facilitate the transfer of information through the supply chain regarding each mineral's country of origin and the smelters and refiners being utilized for the mineral. In 2014, the Company, through the combined efforts of its information technology, procurement operations and legal departments, created an automated database of the completed Conflict Minerals Reporting Templates submitted to the Company by its suppliers (the "Conflict Minerals Response Database"). With the Conflict Minerals Response Database, the Company was able to better process and analyze the information provided by its suppliers and will be able to make year-over-year comparisons of its suppliers' responses in the future. Once in the Conflict Minerals Response Database, all completed Conflict Mineral Reporting Templates received from suppliers were stored electronically in a central location accessible to authorized employees involved in the due diligence process and will be retained in accordance with the Company's document retention guidelines.

In addition, in the first quarter of 2015, the Company became a member of the Conflict Free Sourcing Initiative ("CFSI"), a joint initiative founded by members of the EICC and the Global e-Sustainability Initiative that currently has over 200 participating companies and associations from seven different countries. As a member, the Company has access to a variety of tools and resources to better assess Conflict Minerals in its supply chain, including the Conflict-Free Smelter Program (the "CFSP"), an audit program designed to validate smelters' and refiners' sourcing practices. Through the CFSP validation process, which is voluntary, an independent third party audits the procurement and processing activities of a smelter or refiner to determine if such smelter or refiner shows sufficient documentation to demonstrate with reasonable confidence that the minerals the smelter or refiner processed originated from conflict-free sources. CFSP compliant smelters and refiners receive a "conflict-free" designation from CFSI. With access to the smelters and refiners that have participated in the CFSP, the Company was better able to analyze the data collected in the Conflict Minerals Response Database to determine which smelters and refiners were CFSP compliant and thus, "conflict-free." The Company compared the list of smelter and refiners provided by its suppliers against the list of smelters and refiners that were determined to be CFSP compliant. The CFSP compliant smelters and refiners are identified with an asterisk in Annex 1 to this Report.

Strengthen the Company's engagement with suppliers

The Company informs its in-scope manufacturers and suppliers of its materials disclosure requirements, including its compliance with the OECD Guidance and the Rule, and of specification updates that the Company communicates and tracks electronically. Moreover, the Company has revised the terms of its purchase order and contract terms and conditions to ensure that manufacturers and suppliers are expressly required to support the supply chain due diligence process employed by the Company.

Establish a company-level grievance mechanism

The Company maintains an open reporting system through which employees and third parties may report concerns about potential or actual violations of the Policy. Concerns may be reported anonymously or for attribution through several channels, including through an employee's immediate manager or the Company's legal department.

Identify and Assess the Risks in the Company's Supply Chain

Based on the knowledge of the senior executives in the supply chain organizations, the Company determined that all of the products manufactured or contracted to be manufactured and sold by the Company contained at least one of the Conflict Minerals. As a result, the Company performed the following measures for the reporting period to identify and assess the risks in the Company's supply chain.

Identify All Company Suppliers. The Company's first-tier suppliers were identified by generating a report from the Company's manufacturing and procurement systems of all vendors who supplied components or products for the Covered Products that were manufactured during the reporting period and contained Conflict Minerals. For components delivered to the Company by distributors, the manufacturer of the component (i.e., the supplier of the distributor or the Company's second-tier supplier) was identified and added to the supplier list. The supplier list was reviewed by three senior managers or directors in the supply chain department to ensure that each supplier met the appropriate criteria. The suppliers appearing on the confirmed supplier list,

each an in-scope supplier, was assigned to a supply chain department employee.

Request Conflict Minerals Reporting Template. The Company performed due diligence to identify the risks in its supply chain by utilizing the Conflict Minerals Reporting Template to determine, using good faith efforts, the smelters and refiners in its supply chain. As set forth in the Conflict Minerals Reporting Template, manufacturers and suppliers, which completed the survey, made representations and provided information regarding (i) the country of origin for the Conflict Minerals contained in the components or products it provides to the Company; (ii) whether such Conflict Minerals directly or indirectly finance armed conflict in the DRC; (iii) all of the smelters in the supplier's supply chain for such Conflict Minerals; (iv) whether such smelters have been validated in compliance with the CFSP; (v) whether the supplier has its own Conflict Minerals policy that requires its own direct suppliers to be conflict-free; and (vi) whether the supplier uses the Conflict Minerals Reporting Template with its own suppliers to gather similar information.

The information in the surveys received from manufacturers and suppliers was reviewed against the CFSI's Conflict-Free Smelter list. If correctly completed, each survey identified the smelters and refiners within the solicited supplier or manufacturer's supply chain. Thus, the Company compared each completed survey against the CFSI Conflict-Free Smelter list to determine whether the smelters or refiners associated with the surveyed supplier or manufacturer qualified as "conflict-free." The CFSP uses independent third-party auditors to audit the source, including mines of origin and chain of custody, of the Conflict Minerals processed by smelters and refiners which agree to undergo an audit. The smelter or refiner is considered "conflict-free" on the CFSI Conflict-Free Smelter list if the audited smelter or refiner adheres to the CFSP's assessment protocols and the independent auditor verifies separately that the smelter's or refiner's Conflict Minerals originated from conflict-free sources. To be compliant with CFSI standards, smelters and refiners must disclose to the auditors the identities or locations of the mines from which they source their Conflict Minerals. The CFSI Conflict-Free Smelter list includes the names, locations and links to conflict minerals policies of all smelters and refiners deemed compliant with the CFSP's assessment protocols.

In the fourth quarter of 2014 and the first quarter of 2015, the Company sent a letter and the Conflict Minerals Reporting Template to each in-scope supplier included on the confirmed supplier list. The letter (i) reiterated the requirements of the Rule and its applicability to the Company, (ii) requested that each supplier complete the Conflict Minerals Reporting Template for all products supplied to the Company in 2014 and (iii) encouraged suppliers to use smelters which appeared on the CFSI's Compliant Smelter List. The Company contacted suppliers that did not respond to the Company's request by the specified date and suppliers that submitted incomplete or inaccurate requests for follow-on discussions and to request additional information, as applicable.

Compile and Assess Responses. For the reporting period of January 1, 2014 to December 31, 2014, the Company identified approximately 417 in-scope suppliers. As of May 15, 2015, the Company received responses from approximately 372, or 89%, of the in-scope suppliers, including completed Conflict Minerals Reporting Templates from 341, or approximately 81.8%, of the in-scope suppliers. Through the use of the Conflict Minerals Response Database and access to CFSI information, the Company was able to identify the smelters and refiners it believes were used to process the Conflict Minerals contained in the Covered Products as set forth in Annex 1 attached to this Report as well as identify which of those smelters and refiners were CFSP compliant. The following table sets forth the number of CFSP compliant smelters and refiners in our supply chain as of the end of 2014 for each of the Conflict Minerals used in the Covered Products:

Conflict Mineral	CFSP Compliant Smelters or Refiners
Gold	53
Tantalum	34
Tin	34
Tungsten	14

The Company relied on the completed Conflict Minerals Reporting Templates it received from its suppliers as the main source of documentation supporting the representations made by such suppliers regarding the source and chain of custody of relevant Conflict Minerals.

In light of the complexity of the Company's and its suppliers' supply chains, the Company is currently unable to assess adequately all of the risks in its supply chain. However, the Company has taken and continues to take steps to manage

risks, including (i) engaging with manufacturers and suppliers to obtain current, accurate and complete information about the Company's supply chains, and (ii) taking part in industry initiatives promoting "conflict-free" supply chains.

Design and Implement Strategies to Respond to Identified Risks

Report findings to designated senior management

The members of the Company's internal conflicts minerals team provided progress reports to the senior management of the Company, including the Company's General Counsel and Chief Financial Officer, as well as the Company's Board of Directors. In light of the complexity of the Company's and its suppliers' supply chains, the Company is currently unable to adequately assess all of the risks in its supply chain. Based on the results of the Company's due

diligence efforts for the reporting period of January 1, 2014 to December 31, 2014, the Company continues to design and implement a strategy to respond to risks identified in the supply chain.

Carry Out Independent Third-Party Audit of Smelter/Refiner Due Diligence Practices

Due to our position in the supply chain, the Company does not have a direct relationship with smelters and refiners, nor does the Company perform direct audits of these entities that provide our supply chain with the minerals that are contained in our Covered Products. Instead, we rely upon industry efforts to influence smelters and refiners to get audited and become certified through the CFSI's Conflict-Free Smelter Program. As a member of the CFSI, the Company was able to further leverage the due diligence conducted on smelters and refiners by the CFSP.

Report Annually on Supply Chain Due Diligence

In accordance with the OECD Guidance and the Rule, this Conflict Minerals Report is available on our website at <http://sats.client.shareholder.com/sec.cfm>.

THE COMPANY'S DUE DILIGENCE FINDINGS AND CONCLUSIONS

Country of Origin of the Conflict Minerals in the Covered Products

Based on the information obtained by the Company during the due diligence process, the Company does not have sufficient information, with respect to the Covered Products, to determine the country of origin of all of the Conflict Minerals in all the Covered Products. However, based on the information that has been obtained, to the extent reasonably determinable by the Company, with respect to the smelters and refineries identified by the Company, such countries of origin are believed to include, to the extent known, the Covered Countries of Central African Republic and Rwanda.

Facilities Used to Process the Conflict Minerals in the Covered Products

Based on the information that was provided by the Company's suppliers and otherwise obtained through the due diligence process, the Company was unable to identify with certainty, all of the facilities used to process the Conflict Minerals in the Covered Products. However, based on the information that has been obtained, to the extent reasonably determinable by the Company, the facilities that were used to process the Conflict Minerals contained in the Covered Products are believed to include the smelters and refiners listed in Annex 1 attached to this Report. The smelters and refiners that the Company has been able to determine as CFSP compliant are identified by an asterisk in Annex 1. As a result of the Company's management systems, particularly the creation of the Conflict Minerals Response Database, the Company was able to identify many more smelters and refiners for the reporting period of January 1, 2014 through December 31, 2014 than were identified for the same period in 2013.

IMPLEMENTATION OF STRATEGIES TO RESPOND TO IDENTIFIED RISKS AND FUTURE STEPS

We have taken, and intend to continue to take, steps to improve our due diligence processes and to minimize the risk that our necessary conflict minerals benefit armed groups. The Company plans to continue to engage with its suppliers to obtain current, accurate and complete information about the supply chain and will continue to improve its due diligence efforts to ensure responsible sourcing in compliance with the Policy. The Company will monitor and track the performance and efficiency of its due diligence efforts and will put in place procedures designed to incorporate any new risks into the risk management plan. The Company continues to provide annual reports to its Board of Directors and senior management as to its due diligence efforts and results for their review and consideration. In addition, starting in 2014, we made reporting on Conflict Minerals a contractual requirement for our suppliers by incorporating the Policy into the supplier code of conduct. With its membership to CFSI, the Company will continue to monitor the progress of the

5

identified smelters and refiners in Annex 1 to determine their CFSP compliance. We also plan to continue to encourage our suppliers to use conflict-free smelters and refiners as capacity becomes available.
